

Payment module for Cash Registers is a special software solution for integration with the retail networks system to accept payments from personal clients. The Cash Registers powered with Payment integration module may accept personal payments from the customers in the retail chains or small family-run stores.

Working Scheme

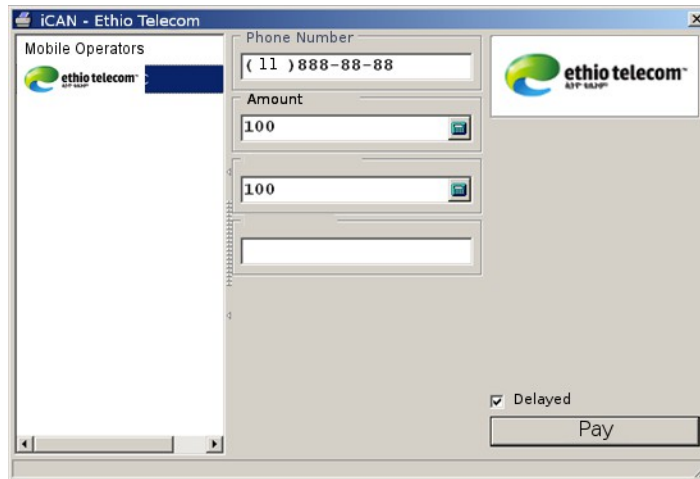

HOW IT WORKS

1. Subscriber Id checking

Firstly the cashier selects Service Provider from the left menu. Then the cashier needs to enter Subscriber Id (Phone Number or Contract Id) and payment amount.

If the client confirms entered Subscriber Id and Amount, the cashier initiated transaction clicking “check” button. In this stage the billing server of the service provider will check subscriber validity for required financial operation.

2. Payment

In the case of Ok response the cashier just clicks “Pay” to confirm transaction accepting money from the client.

SUPPORTED EQUIPMENT AND PLATFORMS

The system supports the most common types of ECR equipment, in particular devices manufactured by ATOL, Shtrikh-M, Incotex, Oka.

ICAN is scheduled a meeting with members of Ethiopian Cash Register Machines & Software Providers Association to learn all specification used in Ethiopian practice.
